

hackPHS 2026

into the skies...

About

What is **hackPHS**?

hackPHS is one of the most prominent high school hackathons in all of New Jersey, the East Coast, and the US. Hosted at Princeton High School, hackPHS had previously served hundreds of students from high schools across the East Coast. As a 24-hour hackathon, hackPHS's goal is to provide a space for eager and enthusiastic high schoolers to continue their pursuit of computer science, create meaningful projects, learn new skills, and form new bonds.

Why are we **different**?

Being double the length of a standard high school hackathon, hackPHS gives participants a greater opportunity to develop a quality project. hackPHS is one of the most well known hackathons in New Jersey, and is located in the academic town of Princeton, NJ. The event is run by members of the PHS Competitive Programming Team who have ranked highly in Lockheed Martin's Code Quest and the PHS Math Team who have won and ranked highly in national competitions such as PUMaC, HMMT and Purple Comet. By sponsoring hackPHS, you create an amazing outreach opportunity and connection with one of New Jersey's best computer science and math programs at one of the most well established high school computer science events in the Mid-Atlantic.

Benefits

Talent Recruitment

- **Meet** talented high school students with strong programming and computer science backgrounds from across New Jersey and the East Coast
- **Interact** with members of Princeton High School's award winning Competitive Programming Team + Computer & Robotics Club
- **Access** student contact information, GitHub portfolios, and hackathon projects for potential internship and recruitment opportunities

Brand Awareness

- **Showcase** your brand to many of the best and brightest programmers in New Jersey, demonstrating your commitment to advancing intellectual exploration to an entire generation
- **Introduce** your company to students during our opening ceremony at Princeton High School's prestigious campus
- **Connect** with students already interested in CS and math

Product Development

- **Promote** your APIs, development tools, and platforms to eager high school programmers during the 24-hour event
- **Facilitate** hands-on coding workshops and technical talks to demonstrate your products to participants
- **Mentor** students as they integrate your tools into their hackathon projects and provide real-time technical guidance

Community Outreach

- **Support** the next generation of computer scientists by investing in high school STEM education in New Jersey and beyond
- **Familiarize** yourself in the Greater Princeton community by being represented online and in-person by one of NJ's most followed hackathons
- **Advance** CS education by partnering with one of New Jersey's largest high school computer science opportunities

Sponsorship
