hackPHS 2025

into the mountains...

about

What is **hackPHS**?

hackPHS is one of the most prominent high school hackathons in all of New Jersey. Hosted at Princeton High School, hackPHS had previously served hundreds of students from high schools across the east coast. As a 24-hour hackathon, hackPHS's goal is to provide a space for eager and enthusiastic high schoolers to create meaningful projects and form new bonds.

Why are we **different**?

Being double the length of a standard high school hackathon, hackPHS gives participants a greater opportunity to develop a quality project. In addition, hackPHS is known for attracting a majority of hackathon participants all over the east coast.

benefits

Talent Recruitment

- **Meet** talented high school students with strong programming and computer science backgrounds from across New Jersey and the East Coast
- **Interact** with participants from Princeton High School's Computer and Robotics Club and Competitive Programming Team
- **Access** student contact information, GitHub portfolios, and hackathon projects for potential internship and recruitment opportunities

Brand Awareness

- **Feature** your company logo on our website, social media channels, and event materials distributed to hundreds of participants
- **Introduce** your company to students during our opening ceremony at Princeton High School's prestigious campus
- **Showcase** your brand at our sponsor fair and networking sessions with direct student interaction throughout the event

Product Development

- **Promote** your APIs, development tools, and platforms to eager high school programmers during the 24-hour event
- **Facilitate** hands-on coding workshops and technical talks to demonstrate your products to participants
- **Mentor** students as they integrate your tools into their hackathon projects and provide real-time technical guidance

Community Outreach

- **Support** the next generation of computer scientists by investing in high school STEM education in New Jersey
- **Foster** diversity in technology by supporting students from underrepresented backgrounds in computer science
- **Advance** CS education by partnering with one of New Jersey's most prominent high school hackathons
